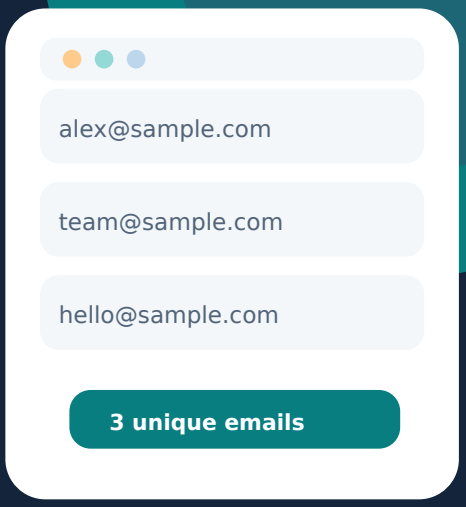
FREE ONLINE TOOL

Extract email addresses in seconds.

Turn text and supported files into a cleaner email list - without signup or subscription.



A simpler way to collect emails

The Free Email Extractor from DigitalTech360 finds email addresses already present in your text or documents. Remove duplicates, tidy the list, and export the results in a few clicks.

How it works

01 **Paste or upload**
Add text or choose TXT, CSV, HTML, or PDF.

02 **Customize**
Apply filters and remove duplicate addresses.

03 **Extract**
Click Extract Email Addresses to see results.

04 **Copy or export**
Use Copy All, Download TXT, or CSV.

Free Email Extractor

Everything you need to tidy a list

Extract, organize, and export email addresses using a single browser-based workspace.

Supported inputs

Paste text or open TXT, CSV, HTML, and text-based PDF files.

Cleaner results

Remove duplicates, sort A-Z, and convert addresses to lowercase.

Flexible filters

Include or exclude matching text and filter technical or auto-generated addresses.

Simple export

Copy your results or download them as TXT or CSV for spreadsheet use.

Where it helps most

- **Contact list cleanup**
  Find addresses inside messy exported records.
- **PDF directories**
  Collect addresses from PDFs with selectable text.
- **CRM preparation**
  Organize addresses before reviewing or importing records.
- **Spreadsheet workflows**
  Export CSV for Excel or Google Sheets.

Privacy-minded by design

Text is processed in your browser. For PDF files, a parsing library is loaded when needed; the tool does not intentionally upload file contents for extraction.

info@example.com

sales@example.com

4 matches / 3 unique emails

Good to know before you extract

Does the extractor verify addresses?

No. It recognizes email patterns; it does not confirm that an inbox exists or accepts mail.

Will it work with scanned PDFs?

Not directly. PDFs need selectable text. Image-only or scanned PDFs require OCR first.

Can I extract emails from a website URL?

Not by crawling a URL. Copy the relevant text or accessible HTML and paste it into the tool.
