

# Dowsing Rods

***Dowsing is a tool that allows direct intuitive communication.***

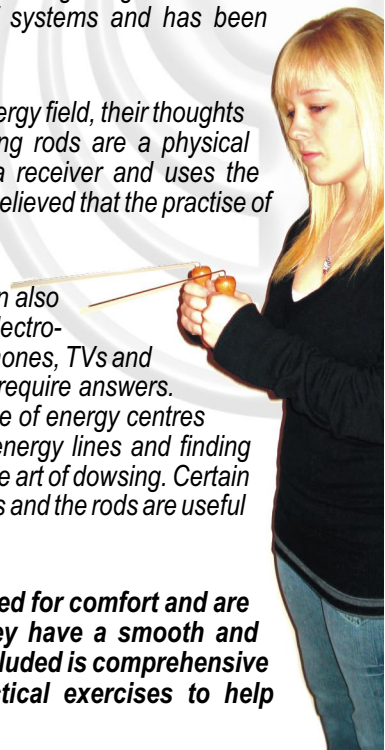

Dowsing is a form of divination to receive guidance or answers to questions that can't be answered by one's rational thought processes or five senses. Dowsing is a golden thread that connects and runs through all cultures, religions and belief systems and has been practised throughout the millennia.

Use your dowsing rods to measure the strength of a person's energy field, their thoughts and emotional state of being. The movements of the dowsing rods are a physical indicator of existing intuitive knowledge. The body acts as a receiver and uses the movements of the dowsing rods to amplify this information. It is believed that the practise of dowsing can lead to the development of one's intuitive nature.

Dowsing can be used to measure a person's energy field. It can also be used to measure the energy fields of crystals and the electro-magnetic radiation fields of electronic devices such as cellular phones, TVs and computers, or one can dowse for 'yes' and 'no' questions that require answers.

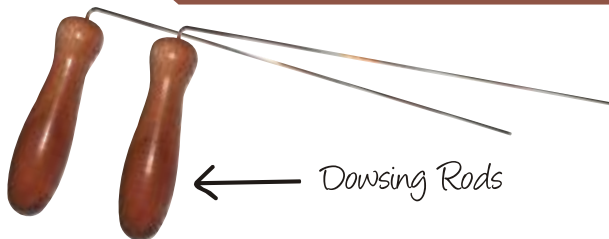

Healers use dowsing to assist in patient diagnosis (i.e. the state of energy centres and the selection of remedies). Measurement of the earth's energy lines and finding geopathic stress areas in one's house is another way to utilise the art of dowsing. Certain industries use dowsing to locate underground water and minerals and the rods are useful for finding lost objects.

**The dowsing rod handles have been ergonomically designed for comfort and are hand-crafted on a lathe using an African hardwood. They have a smooth and sensitive feel which allows for increased accuracy. Also included is comprehensive information on dowsing, how to dowse, tips and practical exercises to help accelerate your dowsing skills.**
