

Dear Colleagues,

RE: consultation

I would like to consult you concerning my independent, 30-year-long research in physics, titled **“A Theory of Ether, Particles and Atoms”**, initiating the reform of modern physics (see the research and its abstract online below). In July 2007 I printed privately that research as a book and sent it to academies and libraries of some Western countries. In 2008 I registered it at the Copyright Office of the Library of Congress and in March 2009 I printed its second edition, distributing dozens of its copies among universities, libraries and scientific centers the world over. I have also sent the digital copies of the research to some of them.

Strangely enough, despite my numerous letters in this regard, I have not received a single response with an opinion concerning the research. Moreover, I have been recently denied, without any convincing explanation, participation to five international conferences in physics in Europe and Israel. One of the possible reason for such an absolute boycott is the radically new method and results of the research, with my status of independent researcher, which may embarrass any university professor, with his team of students, post-graduate students and the programs of research. There are other possible reasons nowadays. But any thoughtful scientist must admit that it is impossible to ignore such a research for a long time without inflicting harm on science and society. The more so that the crisis of modern science, as an analysis shows, is underlying the present general ideological crisis now threatening the very existence of civilization.

In this connection could you please inform me if you have already seen the above research and, if so, could you please organize my defense of it as a doctorate thesis.

Sincerely,

Igor Makarov, PhD

Independent Researcher
