Dear Sir (Madam),

RE: radical appeal and measures for Europe

I am an independent researcher, PhD, citizen of Israel, currently a pensioner, 83. I appeal to you for assistance in my decades-long independent research in theoretical physics, titled "**A Theory of Ether, Particles and Atoms**" with a subtitle "**Reform of Modern Physics**".

I have a 20-year-long record of futile applications to UNESCO, universities, institutes and conferences in Europe. The main reasons of that failure seem to be the following:

- (1) a monstrous present crisis of modern science and scientific institutions;
- (2) corruption of the European establishment and obscurity of modern universities;
- (3) interference of Russian KGB agents waging an omnipresent secret and contracting conspiracies with their local counterparts against me in Europe and Israel.

Despite that former attitude towards my research, I have decided to appeal to Europe again with a hope that your new organization has been committed to a broader and more responsible mission, given our nuclear age, than your former predecessors.

My hope is based on the following. Civilization has been experiencing a general ideological crisis, now at its crucial stage, threatening the very existence of humankind. Underlying that general crisis is largely the above crisis of modern science, theoretical physics, first of all, because of its fundamental importance for science in general. To settle the above ideological crisis, it is necessary to reform modern fundamental science and religion. I have started such a reform and developed a general methodology for it. Now to proceed with that mission I need a broad international support.

In this connection, taking into account that Europe, because of its ideological conservatism, has now again been pushing civilization to a new world war, would you please take all the necessary measures to organize in Europe an INTERNATIONAL CONFERENCE IN THEORETICAL PHYSICS aimed possibly only on discussing, and making decision on, my above research. You might consider also the possibility of shutting down such not quite responsible but influential organizations and institutions in Europe as EPS, ICTP and CERN, the latter being potentially perhaps most dangerous, while suspending all other international physical conferences in Europe. See online my works in physics and some other relevant papers enclosed.

Yours sincerely,

Igor Makarov, PhD

Independent Researcher
