Dear Prof. Zagorodny,

RE: independent research as a doctorate

I am an independent researcher, PhD (Candidate of Science in Technology, 1965), an Israeli citizen, currently a pensioner, 84. As a result of my almost 30-year-long independent research in Systems Theory and Theoretical Physics, titled "**A Theory of Ether, Particles and Atoms**", that I started in Russia late in the 60s and since 1992 have proceeded with in Israel, Europe and Canada, I obtained results amounting, in my opinion, to a reform of modern theoretical physics and being of vital importance for the destiny of science in general - a millennium event, perhaps.

Although my above research has been published in print and online, it has never been discussed and recognized officially. However, taking into account that it is mainly the crisis of modern science, physics in particular, that has been underlying the present general ideological crisis now threatening the very existence of humankind, I think an official recognition of my research is urgent. For this reason I have decided now to apply to the Bogolyubov Institute of Theoretical Physics, as one of the most authoritative institutions in this field, for a possibility to organize there the defense of my research as a doctorate thesis.

In this connection would you please consider an opportunity to organize the defense of my above research at the Institute as a doctorate thesis. The URLs of the research, its abstract and my CV are enclosed.

Yours sincerely,  
Igor Makarov, PhD
