If you are diagnosed with cancer and the doctor recommends surgery or **chemotherapy** then you must visit for a second opinion at Precision Hospital Undri, Pune

What is Chemotherapy?

Chemotherapy is a treatment that uses drugs that kill rapidly dividing cancer cells to prevent them from growing and making more cells. Many chemotherapy drugs have adverse effects that can be severe. These treatments are effective in many cases of cancer. However, their effectiveness will often depend on the type and stage of cancer, among other factors.

You might have chemotherapy:

- to shrink cancer before surgery or radiotherapy
- to try to stop cancer from coming back after surgery or radiotherapy
- as a treatment on its own, if your type of cancer is very sensitive to it
- to treat cancer that has spread from where it first started.

What to expect from Chemotherapy Treatment?

When you visit **Chemotherapy specialist Dr. Lalit Banswal** at precision Hospital, Pune, you receive complete support and care. Chemotherapy is an invasive treatment that can have severe adverse effects both during the therapy and even sometime after. This is because the drugs cannot differentiate between healthy and cancer cells and tend to target both. However, individuals with certain types of cancer who receive early chemotherapy treatment may achieve a complete cure. This makes the side effects worthwhile for many. Also, most of the unwanted symptoms go away after treatment finishes.

Dr. Lalit Banswal offers chemotherapy treatments for patients with the following cancers:

Chemotherapy is used either as a treatment by itself or in combination with radiotherapy. Dr. Lalit Banswal offers the best protocols for his patients, and the latest personalized treatments, which are prepared on-site. Chemotherapy for

- Biliary Cancer
- Bowel Cancer
- Breast Cancer
- Cervical Cancer
- Liver Cancer

- Lung Cancer
- Oesophageal Cancer
- Oral / Mouth Cancer
- Ovarian Cancer

- Pancreatic Cancer
- Stomach Cancer
- Testicular Cancer
- Thyroid Cancer

How long does it last?

Dr. Lalit Banswal, the **best surgical oncologist in Pune** will make a plan with an individual that specifies when treatment sessions will occur and how many sessions the individual will need. A person may receive chemotherapy for a specific amount of time or for as long as it works. A course of chemotherapy treatment usually **lasts 3–6 months**, depending on the type of drug and stage of cancer. Dr. Lalit Banswal typically administers chemotherapy in cycles, with rest periods between 1–4 weeks. Cycles have rest periods in between to allow a person's body to recover. An individual might have treatment on one day, followed by 1 week's rest, then another 1-day treatment followed by a 3-week rest period, and so on. A person may repeat this schedule several times.

Side Effects of Chemotherapy:

Chemotherapy can prolong a person's life and help eliminate cancer. **Chemotherapy specialist in Pune, Dr. Lalit Banswal** says that the side effects of chemotherapy depend on the type of chemo drug involved. Chemotherapy kills regular cells, as well as cancer cells, and this is why side effects occur. Many people experience these adverse effects, but some people have few or none. Below, we explore 10 of the more common side effects of chemotherapy.

- Infection and a weakened immune system
- Bruising and bleeding more easily
- Hair loss
- Nausea and vomiting
