Don't be fooled by the mainstream media and its cable TV advertising partners. Hence, I'm suggesting that you consider the observations below if you've any doubts in your mind about the media and its advertising partners' professional conduct.

I'm not a big fan of social media either, but think about this, America. The media publicly chastises social media about its addictiveness and the social harm it imposes on minors. But how many times have you seen the media and its cable TV advertising partners promote drugs, violence, and intellectually immoral content on its television networks?

The following paragraph speaks to Silicon Valley's racist, gender-biased, and discriminatory caste system that has widely propagated itself into the back offices of some of America's most prominent corporations and institutions.

Unfortunately for the public, the mainstream media, its cable TV advertising partners, and collaborators are, by many accounts, the proud owners of some of the most sophisticated eavesdropping technology on the planet. Now how do you suppose ordinary Americans may be affected by its daily use? Have you ever wondered how TV commercials that are served to your household are often accurately tailored to your healthcare needs, financial concerns, and leisure activities? The media and its advertising partners are unknowingly and uninvitedly in our homes due to either being underregulated or secretly violating the law. They are likely hacking our smart devices and/or accessing our private accounts to determine who we are, what we like, and what we do. Private accounts would include health records, financial records, and shopping activities online. Lamentably, the media, its advertising partners, and collaborators can weaponize all of that data against any person or entity it targets.

Needless to say, the media, its advertising partners, and collaborators may also be experimenting with mind-reading technologies that raise extraordinary bioethical concerns around "**mental autonomy, privacy, and the potential misuse of brain data**," according to collective online sources. Another grave concern is that the technology may be secretly weaponized to target adversaries. Likewise, the cable TV advertising industry could illegally use the technology to support targeted marketing initiatives.

It is beyond my comprehension that the U.S. government won't hold public hearings on the mainstream media, its cable TV advertising partners, and any collaborators with whom they are in partnership for potentially violating Americans' privacy. Consequently, all involved should be held accountable for their transgressions.
