

## U.S. SCIENTISTS WORKING ON 'RADIOACTIVE CLOUD'

**Described by Glenn Martin as  
Potentially More Dangerous  
Than Atomic Bomb.**

WASHINGTON, May 17 (UP)—  
Glenn L. Martin, Baltimore plane  
manufacturer, said today by way  
of illustrating the constant de-  
velopment of air weapons, that  
United States scientists are work-  
ing on a "radioactive cloud" po-  
tentially more dangerous than the  
atomic bomb.

He said the cloud is not an ex-  
plosive but would be laid down by  
aircraft from great heights. He  
warned that "it may boomerang"  
because it would drift with the  
wind, **once set free in the air**, and  
could blow back on American  
troops.
