

SWEDES FIND ROCKET CLUE

Lettered Metal Fragment Is Now Under Close Study

STOCKHOLM, Sweden, Aug. 14 (U.P.)—Swedish Army investigators have recovered a fragment of metal containing imprinted letters that may solve the mystery of rockets that have been flashing over Sweden and other Scandinavian countries since last May, it was announced today.

The fragment was reported to be a 2.75-inch section of metal. It has been placed in the hands of the Defense Research Institute for investigation.

Three additional rockets were reported sighted in southern Sweden last night, flying silently in a southwesterly direction at a high altitude. These reports said the rockets, bright as stars, passed overhead at intervals of five minutes.

Premier Per Albin Hansson announced today that the Swedish Government has not yet made any representations to any foreign Government in connection with the rockets, not having yet defined their nature and origin.
