# 2022 Midterms - We Can Stop The Election Fraud. IT'S TIME TO ACT!

\*Version: 10/26/2022 11:08 AM ET Added: Best Voting Methods (pg. 7)

One thing we learned from the 2020 election is that post-election litigation does not prevent Democrats from cheating and stealing elections. It's time to be proactive and step up before the midterm election. We currently have one month to act. Patriots must register as poll workers, observers, and get involved. But we must do more. This document provides several county level suggestions to help prevent fraud. A few might require legal action. We will <u>update this PDF</u> regularly. Below are some highlights.

- File lawsuits demanding oversight in key areas while elections are active.
- Use the checklists to remind workers what to look for, and to create incident reports.
- Demand GOP observers at loading docks, <u>USPS Regional Centers (P&DC)</u>, at all bulk ballot transfers.
- GOP election staff need an external War Room team to handle issues on their behalf.
- War Rooms must contact top election officials and county supervisors immediately.
- Obtain the printing vendors details about QVF files, ballots printed, total ballots mailed, etc.
- Track in real time all UAA ballots leading up to election day, and while counting occurs.
- Contact local and national media outlets about issues and name obstructing officials.

# **1** - CRITCAL REQUIRMENTS WHILE THE ELECTION IS ACTIVE:

The left launches lawsuits in the final weeks of an election to force courts into decisions. They change registration deadlines, add ballot boxes, and so on. Some cases have been heard in as little as 2 days. Focus your lawsuits on areas that will have the most impact while the election is active. Demand changes that will solve areas of past fraud, especially if this fraud has been documented. Here's some ideas.

- Demand GOP selected observers be stationed at major ballot transfer locations. This includes the USPS Processing & Distribution Center (P&DC), loading dock at the central tabulation centers, and possibly at the print vendors. Observers must be allowed at these posts until all ballots have been counted.
- b. Ballot counts must be immediately provided to GOP observers who witness ballot transfers at any of these locations. This includes all UAA ballots (Undeliverable-as-Addressed). Ballot trays arriving late on election day might need to be weighed to determine their count (mail machines might be stacked up).
- c. Demand that the "Total Ballots Cast" be provided on election night. Whether they have been counted yet or not, this is the total of all voters who participated. This includes mail-in ballots, in person, provisional, everything. Knowing this total on election night prevents late ballots from being added. Jurisdictions are only providing the total ballots they "counted", then update it each day until done.
- d. Demand that observers are allowed into all areas of the tabulation center that doesn't jeopardize ballot privacy. This includes ballot extraction (envelopes), mail sorting, ballot curing, and so on. The distance rules like the 6 foot sham should be swatted down in lawsuits too.
- e. Demand all delivery vehicles that move ballots, including any rental trucks, be equipped with temporary GPS tracking. These battery operated devices are attached with magnets.

**NOTE:** If possible, demonstrate to the court that the jurisdiction has made prior violations of law. Then present your plan to prevent this from occurring again. For instance, ballots were accepted after the election. And your plan has observers watching all ballot transfers .

## 2 - BALLOT PRINTING & QVF TOTALS:

Most election officials won't disclose the exact number of ballots printed, mailed, or the lists provided. Some jurisdictions send an initial Qualified Voter File (QVF) mailing list to their print vendor. The vendor mails ballots to each voter on this list. But jurisdictions then give these print vendor supplemental lists as new voter registrations arrive. Multiple lists create chaos, duplicates, extras, and so on. Demand your county obtain written answers directly from the vendor, and provide you those actual vendor responses.

- a. Find out how many lists were provided to the print vendor, and their date/time stamp.
- b. Does the vendor check any supplemental lists against ballots already printed and mailed?
- c. Does the vendor data scrub the addresses using USPS services to reduce undeliverable mail?
- d. Does the vendor provide any type of data scrubbing to any of the QVR mailing lists?
- e. Get the total print count for each QVF list. Determine the "Grand Total" of all ballots printed & mailed?
- f. How many non mail-in ballots were printed? Where and when were they delivered?

#### **3** - TABULATION CENTER CENTRAL COMMAND:

Complaints from GOP poll workers and observers fall on deaf ears or get dismissed as partisan disruptions. Election supervisors deflect these complaints to follow orders. If the fraud continues, the GOP staff inside tabulation centers or other areas must escalate to an external team. Every hour 5-8,000 ballots are processed, so time is of the essence. Support "War Rooms" must include lawyers, election experts, and media staff.

- a. In many States the tabulation center workers cannot leave until the polls close. Have cell phones available for them just outside their entrance doors. They can reports incidents right then.
- b. The support "War Room" must accept & vet calls in real time and have some staff close by the center.
- c. War Rooms must escalate issues immediately to top all county officials by phone, or enter their offices.
  - ✓ Verify your contact info for election Directors, Clerks, each County Supervisor, SOS, and so on.
  - ✓ Phone tag, emails, and voice mail is not an option with these officials. Walk in their offices!
- d. Negotiate a resolution in a timely fashion or require a temporary shut-down of the faulty area.
- e. Send the issue and the people obstructing to the media in real time. This includes local radio, TV, national sites, social media influencers, and so on. Have these contacts ready. Check beforehand.
- f. Do not accept excuses that push issues to after the election.
- g. Provide business cards to all GOPer's with the War Room contact info and the escalation steps & rules.
- Maybe rent a motor home for the very problematic tabulation centers. Park it close to the facility as the command center. (About \$300 day, maybe less from the "right" owner). This is hard work so have some fun too!

#### 4 – EMERGENCY, SATELLITE, & MOBILE VOTE CENTERS\*

Example - Motor Home Command Center Ary regular motor home would work

Bad actors are always looking for places where they can deposit large volumes of ballots at one time. Because of <u>a court ruling</u> 2 days before the 2020 election, jurisdictions allowed USPS to deliver ballots directly to vote centers in 12 districts. But people in plain clothes, driving personal vehicles, showed up. They dropped off trays full of ballots, no questions asked. This must stop. The "Emergency", "Satellite", and "Mobile" centers are known locations to accept massive ballot dumps. They have little in person voting, but end up with bins full of dropped off mail-in ballots. **It's important to have eyeballs on these locations and disrupt this activity.** 

### **5** - EYEBALL THE UAA BALLOTS:

Ballots that many call "return to sender" are really named <u>Undeliverable-as-Addressed</u> (UAA). These blank ballots must be returned to the jurisdiction. They are huge numbers and seem to disappear in almost every

major county. These ballots are very desirable to criminals. A tray of 200 can be worth as much as \$4,000. Keep a damn close eye on UAA ballots. The jurisdiction, print vendor, or USPS can generate a near real time report on the number of UAA ballots that USPS has processed. Get this report for the days up to election day, and each day afterwards while they count. Get the report the day it's created. **Verify jurisdictions posses all UAA ballots**.

#### 6 - QUESTIONS FOR THE COUNTY NOW:

Contact your county and ask some questions, collect important contact info.

- a. What do you do with the UAA ballots?
- b. What is your plan for dealing with the (UAA) undeliverable ballots?
- c. How do you flag UAA ballots and in what type of timeframe does that occur?
- d. Can you provide the USPS daily report that lists the number of UAA ballots they processed?
- e. Are there any real time data feeds available, like from poll pads, that provide voter analytics?

#### 7 - INCIDENT CHECKLISTS

We included several checklists at the end of this document. They will help election workers create "Incident Reports". But more importantly, they show what areas and aspects of the election to look out for. These PDF forms can be <u>downloaded at this website</u> or from the (EWP) links below. The site also includes 3 training videos, one for each form. These are exceptional documents with great detail created by Missouri Canvassers, and Cause of America - Missouri.

- Polling Place (EWP3) Incidents occurring at the polling place with workers, machines, process, etc.
- Voter Experience (<u>EWP2</u>) This helps report any issues specific to the entire voting experience.
- Machine Test (<u>EWP1</u>) for people who will watch any testing of tabulation machines.

NIXIE 444 05 03/24/05 RETURN TO SENDER NOT DELIVERABLE AS ADDRESSED UNABLE TO FORWARD BC: 44492050909 \*1432-00188-21-35 հետեփոկվություններություններինություն

THE POST OFFICE "P&DC" EXPLAINED: Each local post office sends their completed ballots and any returned mail to their USPS Processing and Distribution Center (P&DC). The election

# **UNITED STATES POSTAL SERVICE**

jurisdictions pick up these ballots in bulk at this P&DC. There are 308 of these locations across America. Some jurisdictions even have a public "media day" at their P&DC to celebrate the first batch mailed, or first batch returned. The USPS has let the public at these facilities. All printed ballots are delivered to the P&DC to start their mail journey. Ballots that are filled out and given to USPS, end up back at the same P&DC. So it's critical to have eyeballs at these locations. Each is operated by leftist postal unions who are part of the AFL-CIO.

# EXAMPLE #1 (Why Poll Workers Need Support):

In 2020 several GOP poll workers in one county observed the signature validation settings change over 3-4 days. It went from capturing 20 points on each signature, to 15, then 7, and finally zero. Many GOPer's complained to the onsite election supervisors during their shifts. They all received the same answer "We're just falling to far behind", their justification to stop checking signatures. After the election was over it was learned these orders to lower settings came directly from the Director of Elections.

Weeks later when questioned about this, the Director said "I take my orders from the County Recorder". Neither of these two officials were confronted while the election was active. Their offices are located blocks away, shielded from election workers, and valid complaints. Poll workers need an external team with the backbone to contact top officials, walk right into their offices, and demand they follow the law.

## **EXAMPLE #2 (Ballots Arrive Late):**

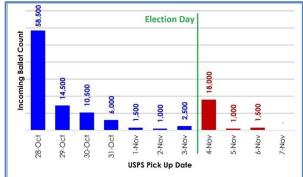

It took 18 months after the election before the professionals at Verity Vote could get documents from Maricopa County about ballot deliveries. Verity Vote discovered over 18,000 ballots were picked at the USPS P&DC by the county over the 3 days following the election. Maricopa is still unwilling to find the missing delivery documents for Nov. 4<sup>th</sup>. All these late ballots were counted.

USPS said they returned over 100,000 UAA ballots to one county during the 2020 election. The County said they only received 55,000, and had them destroyed by their printing vendor. To date, the County still can't find those destruction records. This Lake County, FL official is standing next to a tall rack of Voter Info postcards explaining they were all undeliverable. If these were the thicker ballots, they would fill several racks. UAA ballots are a large volume in every jurisdiction. Prevent them from getting into the hands of bad actors.

# POLL WORKER BUILDING ENTRY, FORMS, NEW RULES:

Fully credentialed GOP poll workers and observers have been stalled as much as 5 hours before they are allowed entry into facilities. This is especially true in PA. One tactic deployed by gate keepers is that you are not on their "new list". They use several other excuses as well. Expect this subterfuge to happen, especially on election day and those counting days that follow. Provide GOP workers the appropriate contact information and the steps to take if this occurs.

Now that many volunteers are aware of the types of fraud, elections are taking proactive steps to prevent discovery and disclosure. Many are restricting access to even more areas. Some jurisdictions now require observers and workers to fill out forms at the end of their shift. They must list any problems they noticed during their shift. This is to discredit citizens at a later date if they bring up something not on the form. The forms also allow jurisdictions to cover their tracks, to hide or even delete information. Some elections act like they are at war with their own citizenry and any transparency.

The radical left infiltrated GOP poll worker training. Their media allies <u>pushed the narrative</u> that GOP training is biased and <u>creating overzealous</u> election workers. This fake news is meant to provide cover for the sketchy election jurisdictions. These narratives could lead to DOJ involvement, a justification back to unequal hiring, and so on. This fake outrage has motivated some officials, using hypothetical situations as justification, to create new rules aimed at "preventing disruptions". No observer should be forced stay in a tiny boxed off area, or be restricted from speaking to anyone other than an assigned supervisor, or other craziness. **Learn any new rules and push back before November 8th.** 

\*Please visit the original <u>Gateway Pundit article</u> and post your suggestions in the "Comments" section. If your suggestion needs a more private disclosure, contact GP directly <u>using this email</u>.

#### TAKE ACTION - GET INVOLVED!

Here's a few places volunteers can still sign up. You're not always redirected to a local group. There's really just to many groups, vendors, and tools to list in any one article.

<u>Tea Party Patriots</u> – \*Allows you to join your own State's election integrity team. One of the better. <u>GOP Victory</u> – This is the RNC. Shows groups & their meetings across the U.S., post events, and more . <u>Operation Overwatch</u> – Although new, it's for hardcore electionists. Some law enforcement backing too. <u>Election Integrity Network</u> – Very insightful newsletters, part of the great <u>Conservative Policy Institute</u>.

Be Bold, Be Brave, Be a Patriot!

## **ADDENDUM:\***

**Chain of Custody Records** - This article suggests having **"GOP selected**" and vetted people as real time chain of custody observers in those areas with the highest concerns. Spending months after an election, asking a jurisdiction for chain of custody documents, can still be necessary. But this **DOES NOT STOP FRAUD**. Jurisdictions delay production of records, often provide only what is clean, and say the rest is missing.

There's often a close-knit insider type network of staff and managers that work in the Warehouse, Field Staff, and Ballot Courier type roles. These "back of house" operations have little to no scrutiny. It's not uncommon for an election Warehouse Manager or Field Supervisor to hire the exact same "GOP" person year after year, for the same role. Deceptively registering as a "R" or "I" years ago is one way to cheat the system. It's one example how "election selected" workers are supposedly from each party, but both can be liberal activists.

**Total Ballots Cast** - Mentioned in item #1. The descriptive name can vary by jurisdiction. It references the total number of all completed ballots in the jurisdictions possession, regardless if they have been counted yet or not. It's a decades old term from long before mail-in ballots became popular. A more modern term might now be "Total Voter Participation". **Not knowing this total on election night** allows late ballots to be inserted and unnoticed. Most jurisdictions cleverly moved to reporting only the ballots they count, as the total.

# **RECAP OF 2,300 READER COMMENTS:\***

The Gateway Pundit reviewed all the reader comments and election suggestions from the "<u>Stop Fraud</u>" article. The below list is in the order of most mentioned, being first.

- Same Day Voting To help prevent the left from knowing how many additional votes they need to win.
- **Remove the Machines** Don't trust them, internet connections, or their ability to manipulate votes.
- Voter ID Most feel this is the simplest way to prevent illegal and non-citizen voting.
- **Paper Voting** Suggests that we use paper ballots, not machines that convert them to images.
- Law Enforcement They want onsite investigations immediately and fraudsters punished harshly.
- Hand Counting Counting done at precinct level with both party oversight, then roll up results.
- No Ballot Boxes Prefer a substantial reduction in the use of mail-in ballots, and the boxes.

There's a sense that some are afraid to get involved. Those fears range from FBI visits to getting banned from social media or other accounts. Most want the large tabulation centers shut down. Ballots from local honest areas end up in the hands of these Democrat run facilities. They prefer precinct level operations where most State laws require an equal number of workers from each party. The large tabulation centers typically don't fall under these laws. They can be fully stacked with Democrats (like Detroit TCF Center), without recourse, until the laws are changed. Georgia allowed the AFL-CIO to help hire and fill tabulation centers with workers.

## "It's not who votes. It's who counts the votes." - The statement most repeated by GP readers.

One hot topic suggests Republican controlled precincts and counties withhold their voting results until the known corrupt jurisdictions have reported their own results. GP readers are acutely aware that Democrats, using various methods, obtain insight into how many votes they need to win. Readers want to prevent and disrupt this. Most of their frustration is with law enforcement, the judicial system, and the GOP. People are disgusted with their lack of interest or the blocking of fraud investigations. Two readers sum this up.

*Kevin Jenkins* - The problem is: If you uncover fraud, there has to be a system in place to listen to the issues, address the problem, and correct the process. There isn't one.

**Maggie Rayne** - There is no central organization, just random people wondering what to do, wanting to do something, but not sure how. Nothing will get done without organization. Rally the troops so to speak. Unless someone takes the initiative to lead, all of this will never happen, and the cheating democraps will win again.

### **BALLOT BOX CAMERAS:**

Many readers mentioned using more cameras. Some suggest "Trail" cameras typically used for hunting. GP researched stand alone solar powered cameras with battery backups. Some jurisdictions could quickly deploy these at ballot boxes. They send data and images through a monthly cellular subscription. The units range from \$450 to \$1,500 each, with some as high as \$4,000. They require no electricity or internet connection and most have infrared for nighttime video.

Cameras will be helpful only when people start being prosecuted en masse, and then flipped to reveal their employers. Ballot box cameras will rarely stop fraudulent ballots from being counted, even if monitored in real time. Also, there's simply no way to tell which ballots are fraudulent once they are put into the box. Even if you can open a box immediately afterwards, those fraudulent ballots will be mixed in with other ballots on the top.

# **BEST VOTING METHODS\***

(Added 10-26-2022)

# Vote On Election Day, In-Person (EDIP)

The Gateway Pundit recommends Election Day In-Person voting only **if you are 100% certain** you can make it to the polls on election day. The single most important thing is that you do vote. If you must vote early, vote as close to the end of the election as possible. And always try to vote in-person. Failure to exercise Election Day In-Person (EDIP) voting will result in the extinction of election day voting. This leads to more centralization.

The left has dozens of sophisticated election partners. This includes analytics from <u>GfK MRI</u>, <u>Civis</u>, <u>Clarity</u>, <u>BlueLabs</u>, and many more. Their registration insight comes from ERIC and database behemoth <u>Catalist</u>. They have resources from Big Tech, visual analytics like <u>Tableau</u>, and so on. Integration, cloud services, and marketing provided by subsidiaries of <u>Salesforce.com</u>, and many others. For nearly 15 years USPS has worked exclusively with left wing groups to develop the ballot supply chain insight they need.

Numerous universities including <u>Stanford</u>, <u>Harvard</u>, <u>CalTech</u>, <u>Princeton</u>, and <u>MIT</u> all have dedicated election departments who partnered with the left to provide election intelligence. The lefts <u>Arabella Advisors</u> network has over 300+ non-profits with a \$2 billion budget. These non-profits, along with help from Labor unions and others, conduct massive GOTV campaigns. The lefts election analytics infrastructure is staggering.

All this infrastructure was created for a reason. It provides early intelligence as votes arrive in the weeks and days leading up to election day. This data is compared against historical election results and trends to create models. They push for mail-in ballots and early voting because this early insight gives them time to react, legally or otherwise. They can target race, gender, age, precinct, census tracts & block groups, mobile devices, social media accounts, and so much more.

<u>Retired Colonel Shawn Smith</u> worked with analytics experts like Jeff O'Donnell, Dr. Walter Daugherity, Draza Smith, and others. They looked at the profiles of voting including the number of votes, types of votes, and the patterns they produce. They found bad actors are injecting votes to meet a setpoint. Voting on election day deprives them the ability to run models on how many votes must be injected to win. If you don't vote early, they don't know if they can inject a ballot in your name.

If you show up on election day and they say you already voted, show them your mail-in ballot to prove you have not. Then contact your Sheriff's Department and tell them your identity has been stolen. This type investigation is not accountable to a SOS or the election jurisdiction. Voting on election day, or close to the end of the election, reduces the time they can act on their intelligence. Election day voting is also consistent with the single day voting described in the U.S. constitution.

Journalists were embedded in Oct. 25th, 2022 debate watch parties between Senate candidates Oz and Fetterman. The local media hid his condition. It was the first time these voters could see Fetterman is truly not fit for the job. After watching his performance, many voters were upset they already mailed-in their ballot.

# Vote Early, and In Person?

Some campaigns suggest Republicans vote early, and in-person. The RNC chair even suggested voting 3 weeks early. One commentator says early voting removes you from GOP lists, which allows the campaigns to focus on those not yet voted. Another claim from a single survey suggests 20% don't show up on election day because of work issues, child care, soccer, and car troubles. Vote early if you believe this provides help to Republican campaigns, and increases turnout.

Campaigns should already be parsing data to remove consistent election day voters, reliable voters, etc. There are much better targets for campaign GOTV efforts. In most jurisdictions only 10-15% <u>vote on election day</u>. If half of these (7%) decided to vote early, would removing this tiny amount from lists help campaigns? Door knockers already walk a sequential route, so little would change. This assumes sophisticated GOTV efforts are in place. Most campaign efforts are bulk tactics - email, postcard mailers, text messages, and auto-dialers.

Late ballot deliveries, stuffing drop boxes, elderly care centers, and other cheats are the result of election intelligence. But our fight is not always just against the left. The NRSC (National Republican Senatorial Committee) spends tens of millions to attack conservatives. Early voting analytics could be shared with Deep State factions so they know which "preferred" RINO candidates need help to win. This same insight can be used against conservative candidates shown to be winning. Those considered a threat to the establishment. In 2020 American voters were given about a month to vote. They could use any method they wanted, with most safeguards removed. But the U.S. only saw a 6% increase in voter participation over 2016. Much of this 6% can be attributed to inflated voter rolls and malfeasance. Another example, Oregon has been voting entirely by mail for almost 25 years. But only 75% participated in the 2020 election. Should we assume those 25% that didn't vote had work issues or car troubles? Election math simply doesn't support the "20% survey".

In the 2022 Primary, Maricopa County had more election day voters than in 2018. But a whopping 80% who entered polling places on election day used a Republican ballot. That's a 23% increase over 2018. Elections have become an industry of "Big Data" with dozens of heavily funded hi-tech players, all seemingly on one side. Vote early if you believe this provides help to Republican campaigns, and increases turnout?

# **Dropping Off Mail-In Ballots:**

If you must use a mail-in ballot, and want to drop it off in person, do this 3-4 days before election day. This timing allows the ballot to be approved, tabulated, and you choices added to the races on or before election day. If dropped off on election day, it's very likely your votes will not be part of the election results reported to the public that night.

When you drop off a mail-in ballot at a polling place, its first day is spent in transportation. The ballots second day is typically spent in scanning, signature validation, envelope separation, and so on. The next 1-2 days are when your candidate choices are tabulated. Some jurisdictions are faster, some slower. Please drop off your mail-in ballot early in the day. If you drop of your ballot late in the day, it might sit overnight in the sealed bin, until couriers arrive the following day.

# Machine Public Test Watch (Incident Report)

Instructions: The 8/28/2022, Election Law defines "automatic tabulating equipment" as the apparatus necessary to examine and automatically count votes. We use the acronym "ATE" to refer to these tabulators. Public testing events of ATE(s), to which the public and candidates are invited, are held before and after elections.

We used the "Voting Equipment Checklist" published by the MO Secretary of State's office to create most incident topics on this report. The

diamond icon (\*) in an Incident description denotes the corresponding item in the SOS Checklist.

An errorless count by each ATE during the testing is required before the machine can be approved for use in the upcoming election. After the test, the ATE(s) are to be held securely so there can be no tampering.

View the training video for this Project, and download the Incident Report form and the SOS Checklist, at Frankspeech.com/video/training-missourielection-watch-machine-public-testing
