Year 8 Isle of Man Schools

HPV vaccination dates for girls and boys in September 2022

With officially notified harms in 60 countries the below named Heads will be permitting cruel, toxic, HPV vaccination of minors to again take place on Manx school premises. HPV vaccines are a black triangle warning product, one that is subjected to increased monitoring. Harms include: ovarian failure, infertility, period disruption, heart irregularities, chronic fatigue, and serious balance issues. This serious damage has been raised with MHKs, MLCs, Manx media and BAR member legalers - who all ignore the evidence. Each support nothing less than: criminally ill-informed, state sanctioned, medical rape - and child abuse.

Meanwhile, to date and in reality, no health board anywhere has proven that an isolated, purified, natural whole genome 'human papilloma virus' ('HPV') exists - have they Dr Rachel Glover?). Please ask the following people in their private capacity to confirm in writing, with full legal liability, the HPV vaccine is:

- 1) Safe
- 2) Effective
- 3) Has contents as labelled

Keith Winstanley, head: Castle Rushen High School; boys and girls vaccination date 29th September

Graeme Corrin, head: Ballakermeen High School; girls vaccination date 23rd, and boys on 30th September

Charlotte Clarke, head: Queen Elizabeth II High School; boys and girls vaccination date 27th September

Sarah Findlater, head: Ramsey Grammar School; boys and girls vaccination date 28th September

Chris Coole, head of: St Ninian's High School; boys and girls vaccination date 21st September

I, the above named, Head of school, do hereby certify that the HPV vaccine being administered is: 1) safe, 2) effective, and 3) has contents as labelled.

I, as a GP / medic named: duly note that Japan withdrew HPV vaccination in 2013 following harms to 2,000 girls during their three month trial.

Please turn over...

On 17th February 2018, I met Dr Diane Harper in Thessaloniki, Greece, where she presented at the 8th Hellenic HPV Symposium. Dr Harper was lead scientist on the 'Gardasil' by Merck, HPV vaccine 'trials'. (She **previously** received substantial funding from Merck... and GSK...). During our 3.5 hour lunch she confirmed she had only been allowed to present in Greece (after an eight year censure for questioning safety) if... she assured the organisers '**she would not mention HPV vaccine harms**'.

On Tynwald Day (5th July 2019) **I was arrested** at Tynwald Hill **while wearing an 'HPV Vaccine Deaths' yellow vest**, so was prevented from presenting my HPV vaccines petition for redress. Also present (at my invitation) on Tynwald Day 2019 was US lawyer Kim Mack Rosenberg, co-author of the book: The HPV Vaccine On Trial - one of five international HPV vaccine harms books.

On Tynwald Day (6th July 2020) **I was again arrested**, this time at Ballacraigne crossroads **while wearing an 'HPV Vaccine Deaths' yellow vest**.

There has been lock-step **refusal for any open public debate** by Manx GP Dr Helen Freer (despite her writing about HPV vaccines: 'I fear we are sitting on a timebomb'. Dr Alex Allinson also refuses debate, so did Dr Henrietta Ewart (since 2017), as the former Isle of Man Director of Public Health.

Trial fraud: The BMJ (The British Medical Journal) published this Paper questioning the *selectivity of evidence* of HPV harms: <https://ebm.bmj.com/content/early/2018/07/27/bmjebm-2018-111012>

The HPV vaccine remains a censored 'canary in the mine' of vaccine harms... But, officially listed MHRA 'covid' jab harms cite adverse effects to at least 1,012 Manx people (postcodes IM1 to IM9).
