

BUYING A VW BATTERY

There's no
'one-size-fits-all'
when it comes to
buying VW
battery

There's no 'one-size-fits-all' when it comes to buying VW car battery. VW makes a huge range of vehicles, from motorbikes and low-consumption compact cars to luxury vehicles, SUVs and campervans too.

The VW brand is all about mobility and its vehicles are known worldwide for reliability, comfort and their unique identity. So, to make the most of your car or van, you need a reliable VW battery. But which one? First, ascertain the type of battery you need. A campervan, for instance, needs the best VW leisure battery to power the electrical appliances that make life comfortable. Cars, though, need a battery that kick-starts the engine when you turn the key in the ignition.

If it's a car battery you're after; many still use lead-acid batteries, but diesel models may need a more powerful version. If your car has a ton of electrical gizmos, and features start-stop technology, you'll want enhanced cyclic mat (ECM) or absorbed glass mat (AGM) batteries – more expensive, but will keep your car running for longer.

The best tip for buying a VW Beetle car battery is to replace like with like: use the details on your existing battery to guide you towards the right choice.
