Introduction: Stock Loans and Securities Financing

Platinum Global Bridging Finance provides stock loans and **single stock loans** through our panel of stock loan companies and providers that we have formed close relations.

We can offer various stock loan structures to release monies from your existing stock portfolio in as little as 7 to 14 days. We work with off-market private lending institutions with access to capital from investment funds and high-net-worth lending pools not available on the open lending market.

Our lenders range from Banks, Investment Banks, Private Family Offices, Financial Institutions, Private Institutions, Asset Managers, Hedge Fund Lenders, and Specialist Lenders all the way through to High Net Worth Private Individuals that can take a specialist view upon low volume traded securities for a stock loan.

Our diverse lending panel offers stock loan services and is based around the globe in Europe, the United Kingdom, South America, South Africa, Hong Kong, Malaysia, Thailand, Singapore, the USA, and Asia. We cover all lending markets globally and can secure the best lending terms for our stock lending loan clients.

Step 1: Property Bridging Loans

Share repurchase agreements offer a flexible financial solution for loans against equity, where clients sell their shares to a lender in exchange for a loan. As part of the agreement, the client has the option to repurchase the shares from the lender at a later date if the shares increase in value. This allows the client to benefit from any potential market gains.

However, if the shares decrease in value, the client can choose not to repurchase them, as the loan is already secured against the shares. This arrangement provides a level of financial protection for clients, allowing them to access funding without the risk of additional losses on their equity. It's a strategic tool for leveraging the value of shares while maintaining flexibility based on market performance.
