

HatchSense™

...another feature of ThinkWise™ Technology

Produces healthier birds, not just the first day but all through the grow-out period!

HatchSense™

- Jamesway's HatchSense™ identifies the moment the chicks begin to hatch.
- Lights on the HatchSense™ attract the first hatched birds which trips the sensor, then the light turn off.
- HatchSense™ immediately adjusts the environment to decrease the hatch window.
- HatchSense™ automatically provides the right conditions for a better hatch.
- More birds hatch in a shorter span of time, increasing the hatch rate and improving the health of the new chicks, not just on the first day but throughout their grow-out period.

HatchSense™ attached to a stack of plastic hatcher baskets, monitoring eggs to detect when the first birds hatch.
