

Storage Racks – Manufacturing warehouses should shoulder a major responsibility for rack system success or failure. Rack damage caused by lift equipment abuse is the leading cause of rack system failure and collapse. Below are a few items to check for:

- Conduct a thorough rack safety audit.
- Develop and implement a driver training program with accountability written into the process.
- Install and maintain rack capacity plaques in several obvious and visible locations.

JUNE SAFETY CAMPAIGN!!

STORAGE RACKS

2021

Things to Consider

1. **Building space & installation**
2. **Load rating, design, inspection and maintenance**
3. **Anchoring**
4. **Minimum height of storage to sprinkler shall be 18 inches (45.7 cm)**
