

COWS alone, play a "colossal role" in our 'CLIMATE' CRISIS!

As <u>the</u> single largest agricultural source of **METHANE** - a potent planet-warming gas - the world's 940 million COWS alone, spew **15-20%** of ALL greenhouse gas emissions (much of it through their "belches" and "droppings") - **more** than the exhaust emissions from **ALL** of the world's cars + trucks + planes + trains + ships >>>>>> **C-O-M-B-I-N-E-D!!**

Moreover, an accumulated <u>body of evidence</u> shows a very "clear link" between the high intake of **RED** (+ 'processed') **MEAT** + the very high **HEALTH RISKS** ... for HEART DISEASE // CANCER // DIABETES // OBESITY // PREMATURE DEATH ... all - as a result of the massive human **meat** consumption [COWS / PIGS / etc]! MORE: Click HERE!

The <u>EVIDENCE</u> is consistent, across many scientific studies, regarding severe human HEALTH problems (from excessive **MEAT** eating) >>>> and, equally as bad is - it is **also** KILLING our **PLANET**!

Bottom Line >>> we must STOP EATING ANIMALS >>>> [5-min] VIDEO >>>> MORE!

OK, busying ourselves with - installing SOLAR PANELS - buying ELECTRIC CARS - and getting rid of backyard SWIMMING POOLS ... these actions can actually lead to complacency ... further preventing today's average citizen from even "thinking" about something as simple, as easy, and as powerful, as - just CHANGING WHAT WE EAT!

Most people have this idea that humans have been switching **energy sources** for the last few centuries. I.E. first, we used WOOD - then we used COAL - then OIL and NATURAL GAS.

In reality, we're STILL using ALL of the old energy sources. In fact, we are burning <u>more</u> **COAL** than ever before! And now, we're switching to >>>>>>> **RENEWABLES**??

Sure, we're using <u>RENEWABLES</u> too, but they haven't stopped us from continuing to burn <u>more</u> **FOSSIL FUELS** - every year. In 2023-24 for example, there was a **5% increase** in global energy demand - and half of that was met with **Fossil Fuels** - especially the increased burning of COAL! Hmmm ... **RENEWABLES** are simply NOT "replacing" anything whatsoever. All they're doing is

simply NOT "replacing" anything whatsoever. All they're doing is making ELECTRICITY slightly cheaper, which in turn, encourages people to use MORE electricity! NET ZERO?

RAISING AWARENESS

IF ONLY we had enough "influential" people (with BACKBONE!) - to "sound the ALARM BELLS" about this (without trying to "protect" the powers-that-be!) - ANCHORS (like Diane Sawyer / Jane Pauley /

Katie Couric / Christiane Amanpour / Anderson Cooper / Ali Velshi / Chris Matthews / etc, etc) or these FAMOUS people (Al Gore / Joe Biden / John Kerry / King Charles / Paul Hawken / Bill Gates / Ankur Desai / Bill McKibben / Paul Block / J. Morris Hicks, etc) - and the MEDIA (Magazines / Radio / Newspapers / Social Media / TV / etc / etc) ... perhaps ... just maybe - our population would start to "comprehend" the LOOMING DISASTER that awaits us ALL >> IF we do not take immediate ACTION >>> to SAVE OUR PLANET >>> NOW!

And the <u>First</u> - and **BEST** - way to:

- AND ·
