About Colostrum6 => **POWDER**

My name is Peter Arnold, from Ontario, Canada - and the information in this PDF is based strictly on “my own” experience with this amazing product - **Colostrum6**.

Compared to "other" POWDERS - the Anovite **Colostrum6 POWDER** is "difficult to mix" - with WATER, since, as Anovite says, Colostrum6 "lacks" artificial anti-caking chemicals - it features high levels of natural bioactive proteins - and it easily attracts moisture.

Pure **Bovine Colostrum POWDER** contains delicate immunoglobulins - and growth factors - that both act stubborn, when introduced to “plain water” - with just a spoon. Unlike tiny SALT granules, or say, WHITE FLOUR powder - **Colostrum6** powder is a much thicker substance.

TIPS for Using Colostrum6 >> POWDER

First - pour / scrape the Colostrum6 POWDER - from the Anovite BAG - into a "separate" (air-tight) CONTAINER. It then makes it “easier” to access.

Next - scoop out the **Colostrum6** Powder (the tiny “lumps”) - from the Container ... considering any of the following ways, to consume it ...

a)- Using a good Shaker Bottle - adding cold water - "shake the **Col.6** + water" - really hard - for 30 seconds - and drink.

b)- Sprinkle on a slice of BREAD (adding Jam, or Peanut Butter, if you wish) - but do “not” use on toast. The **Col.6** spreads on more like a paste, than as a powder. And, drink lots of “cold” water along with this method.

c)- Mix with soft foods ... stirring the powder into yogurt, **unsweetened applesauce**, pudding - and drinking lots of water. Many prefer this simple way to take **Col.6** powder, **including “me”**. :>) (for the **applesauce**, just place it, and the **Col.6** powder, into a small dessert dish & stir briskly).

Note: Always avoid "heat": Keep all liquids cold, cool, or at room temperature - so that you do not damage the fragile "active immune" factors. And drink “cold water” with the **Col.6** powder, or **Col.6** powder “mix / combo”.

About Colostrum6 Powder => DOSAGES

Start out with a SMALL quantity of **Col.6** at first ... “twice” daily - increasing that **Col.6** quantity “gradually” over the next few days / weeks (keep in mind that this **Col.6** product is an “entirely NEW” substance to the body).
