

INTERACTION

Esrevatem is real space featuring real people and real objects, where interaction is possible between people through developing protocols in the real world.

Understanding esrevatem is extremely complicated, especially because it is already existed and is happening every day.

Unlike metaverse, a virtual world which uses a collection of nascent technologies, including augmented reality (AR) and virtual reality (VR), to allow users to interact in a virtual world; esrevatem, on the other hand, is just simply to have people interact in the real world through developing protocols. In saying that, imagine that there is a power outage or a solar storm - when power and internet is out, it would wipe out the whole of metaverse, but esrevatem will not be affected at all.

Esrevatem give people the real interaction back by developing protocols to build community and bring the world closer together again, it is simply real virtuality (RV), an unreal experience. ESRE token is also developed for this purpose, to interact.

ERGONOMIC MODEL

Esrevatem (ESRE) is a token/memecoin developed in one of the world's best developed and safest cryptocurrency systems, the Binance Smart Chain (BSC) ecosystem. ESRE offers nothing but to promote real virtuality experience in real space and interaction between people. Initial swapping is available on decentralised finance (DeFi) platform PancakeSwap, providing fast, safe, and reliable exchange.

In the genesis of ESRE, 1,000,000,000,000 ESREs are generated.
