

# ULTRASONIC MOUSE & RAT REPELLENT

**AMZ  
BRAND**

MODEL: HX - 188

**INSTRUCTIONAL GUIDE**

**2 PACK**

## 01 OVERVIEW

Animals such as mice and rats communicate using acoustic signals and ultrasound for mate attraction, courtship, and rivalry behaviour. The auditory systems of mice and rats are very developed and sensitive to ultrasounds.

If a powerful ultrasonic pulse can be used to interfere with and stimulate the mouse hearing system effectively, it will be intolerable, and it will cause panic and anxiety, which will drive the rodents away from your house. Most people think that the best solution is to kill them. This will not solve the problem as always will be the "Supply amount."

*The best solution is to use an **Ultrasonic Mouse and Rat Repellent device** to reduce the supply amount, and no new rodents will invade the house.*

## 02 HOW TO USE

To change the modes, press one time on the On/Off button

### MODE 1

*Blue Light*

### SILENT MODE

*Use for light pest infection.*

Fixed frequency mode, no sound.

Use for quiet places like bedrooms, restrooms, etc.

**MODE 2***Green Light***AUTOMATIC FREQUENCY CHANGE MODE***Use for medium pest infection.*

The frequency automatically changes from 10KHZ to 100KHZ and vice versa.

Use for noisier rooms like kitchens, offices, living rooms, etc.

**MODE 3***Yellow Light***DUAL-WAVE ENHANCEMENT MODE***Use for severe pest infection.*

Ultrasonic + electromagnetic wave.

Use for large spaces like warehouses, garages, undergrounds, etc.

**MODE 4***Red Light***THE MOST POWERFUL AND EFFECTIVE MODE OF USE.**

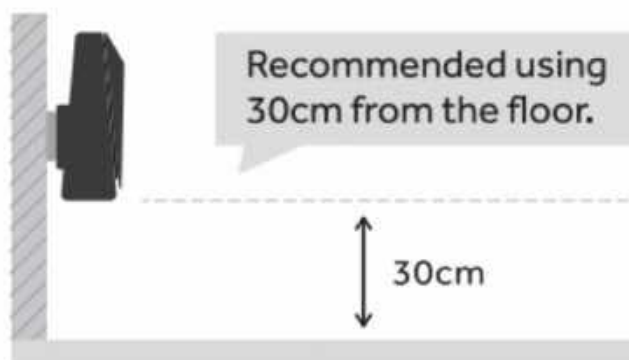

It emits a constant and strong sound.

Humans and pets cannot resist this ultrasound for a long time.

Recommend using this mode when humans and pets are not in the house.

## 03

## INSTALLATION DIAGRAM

- Do not cover. There should be no obstructions in the front.
- If covered, the effectiveness of the product will be affected.
- Install one device in each room with a pest problem for the best effect.
- For larger areas, 2 devices per room may be required.

## 04

## TIPS

- 1 For best results, install one ultrasonic repellent device in each room with a problem.  
For larger areas, two units may be required.
- 2 Try not to keep the doors and windows of the protected area open to avoid pests running away from the ultrasonic sound without being affected enough to ensure the product's effectiveness and prevent return pests.

## 04 TIPS

- 3 | Please wait three to four weeks for the complete results. It is normal to experience an increase in rodent activity during the first several weeks as they are being driven away from their hiding spots due to ultrasonic sound waves.
- 4 | To ensure the best effect of the product, avoid hiding the product after solid objects like furniture (closets, sofas, nightstands, etc.).
- 5 | For better effect, it is essential to use the product without interruption until the problem is solved.

## 05 CAUTIONS

- Please don't clean the device with water or a damp cloth.
- Indoor use only.
- Keep away from moisture.
- Please do not cover the repellent when it is working.
- Do not use around rodents pets such as hamsters.
- If cats or dogs are irritated with Modes 2-3-4, switch to Mode 1.
