

ULTRASONIC MOUSE & RAT REPELLENT

**AMZ
BRAND**

INSTRUCTIONAL GUIDE

MODEL: UR - 24

01 OVERVIEW

Mice and rats use acoustic signals and ultrasound for various behaviours including mate attraction, courtship, and rivalry. These creatures have a well-developed and sensitive hearing system, especially tuned to ultrasounds.

A powerful ultrasonic pulse can effectively interfere with and stimulate these rodents' hearing system, causing discomfort, panic and anxiety. This ultimately drives them away from your home, reducing the rodent 'supply amount' rather than merely killing them.

This Ultrasonic Mouse Repellent device is your ideal solution to prevent further rodent invasion in your home.

02 HOW TO USE

Press the On/Off button once to change modes.

MODE 1

Green Light

SILENT MODE

This is suited for light pest infection. It uses a fixed frequency mode with no sound, ideal for quiet places like bedrooms, restrooms, etc.

MODE 2

Blue Light

AUTOMATIC FREQUENCY CHANGE MODE

This mode is for medium pest infection. The

02

HOW TO USE

frequency automatically changes between 10KHZ to 100KHZ and vice versa. It is best used in noisier rooms like kitchens, offices, living rooms, etc.

MODE 3

Red Light

DUAL-WAVE ENHANCEMENT MODE

Use this mode for severe pest infection.

It uses an ultrasonic + electromagnetic wave combo, suitable for large spaces like warehouses, garages, basements, etc. Be aware that humans and pets might be disturbed by the sound in this mode.

03

INSTALLATION DIAGRAM

The device should be installed approximately 30 centimetres above the floor

30 cm

03

INSTALLATION DIAGRAM

- Install the device approximately 30cm above the floor.
 - This height ensures maximum coverage and repelling efficiency.
- Avoid covering the device.
 - Covering the device will significantly reduce its effectiveness.
- For best results, install a separate device in each room experiencing a pest issue.
 - This ensures comprehensive coverage and maximizes the repelling effect throughout your home.
- In larger rooms or open spaces, it may be necessary to install two devices.
 - Installing two devices ensures full coverage in larger spaces.

04

TIPS

- 1 For optimal results, install one ultrasonic repellent device in each room with a problem. For larger areas, two units may be required.
- 2 Avoid keeping doors and windows of the protected area open. This prevents pests from escaping the ultrasonic sound before they are sufficiently repelled, ensuring the product's effectiveness and preventing a return of the pests.

04 TIPS

- 3 Please wait three to four weeks for complete results. It is normal to see an increase in rodent activity during the first few weeks as they are being driven out of hiding due to the ultrasonic waves.
- 4 To ensure the best effect of the product, avoid placing it behind solid objects like furniture (closets, sofas, nightstands, etc.).
- 5 For the best effect, it is crucial to use the product continuously until the problem is resolved.

05 CAUTIONS

- Please don't clean the device with water or a damp cloth.
- Indoor use only.
- Keep away from moisture.
- Please do not cover the repellent when it is working.
- Do not use around rodent pets such as hamsters.
- If cats or dogs are irritated with Modes 2-3, switch to Mode 1.
