

*The HOME SENTINEL™ by Aspectek is the industry's most advanced indoor pest repellent product.*

*With years of design and technical breakthroughs, this product is simple and safe to operate. This product does not use any poisons or chemicals to destroy pests. It is safe for humans, pets, and also pests.*

### **SAFETY**

*Read these instructions before using this product.*

*Do not restrict airflow around the unit. Do not position behind furniture or curtains.*

*For best effect, position in open space areas.*

*Do not attempt to open the unit beyond its functional use.*

*This pest repelling product is environmentally friendly, safe, and harmless to pests and pets.*

*The HOME SENTINEL™ has multiple components using different scientific techniques to get rid of pests:*

### **ULTRASONIC**

*A high-pressure ultrasonic sound that is only slightly audible to human ears. This pest-repelling technique emits a disorienting pulse that startles and frightens away insects and rodents from your home or office. The indoors are turned into a noisy place and the deterring sounds ward off pests immediately.*

### **IONIC**

*Ions are electrically charged atoms and are common place throughout our atmosphere. Animals are naturally sensitive to negative ions. The ionic control mimics the electrical charge of an incoming storm throughout your entire establishment. Pests become confused, frightened, and seek shelter. Ions also pull bacteria and odors out of the air so pests cannot smell or detect food sources.*

### **ELECTROMAGNETIC**

*Frequency signals traveling through your wires into your home can be detected by pests. The shifting frequency irritates rodent nervous systems while vibrations disturb insect receptors. Because the electromagnetic signals intermittently turn on and off at random intervals, pests are unable to build a tolerance and flee the area.*

### **PRODUCT FEATURES INCLUDE**

*Ultrasonic speakers  
Electromagnetic repelling  
Ionic purification  
3 LED function status blinking lights  
Frequency attack wave range (25 kHz)  
Light sensor  
Direct plug-in  
Pet Friendly  
Smart Nightlight*

### **DIRECT PLUG-IN**

*This is a plug and go product. Position the product in an outlet that is in an open area and not hidden away for increased effectiveness..*

### **OPENING UP THE PLACE**

*Because the ultrasonic waves cannot go through walls or doors it is strongly suggested that doors in the house are kept open for better effectiveness.*

### **HIT THEM HARDER**

*Do not abandon all other pest products after purchasing the HOME SENTINEL. Use in conjunction with different types of pest control procedures and get rid of pests in no time.*

### **PETS ARE PESTS?**

*Position the product in areas of your home away from your pets. The frequencies of this product are in the hearing range of most rodent pets such as rabbits, mice, gerbils, etc.*

### **PRODUCT SPECIFICATIONS**

*Power: 220-240V AC, 50/60 Hz  
Consumption: Maximum 8 Watts  
Ultrasonic Frequency: 25 kHz  
Ultrasonic/Electromagnetic Pulse: Few seconds*

*(Random interval to prevent pests getting used to the signal and maximize effectiveness).  
Ionic Function: Emission random interval up to 1 hour.*

### **TIPS**

*Many pest problems can be solved with a few simple steps:  
Keep garbage lid closed in the kitchen.  
Store food in airtight containers.  
Pet food and water should be put away overnight.  
Repair plumbing leaks and cracks.  
Drain liquids and wash recycled containers before you recycle them.  
Accumulating paper products such as cardboard boxes, bags, newspapers, etc. should be avoided.*

*Keep grass short around the foundation of the house and trees/shrubs planted away from the house.*

*Screen all vent openings such as crawl spaces, attics, or laundry vents.  
Repair and adjust windows and door screens.*

## SMART NIGHT LIGHT

On Sensor setting, as a room becomes dark, the night light sensor conveniently turns on and shuts off when the ambient light becomes brighter.

There are two switches (upper and lower) on the side:

### UPPER SWITCH

OFF: Turns off the automatic night light. (Fig. 1)

SENSOR: Turns on the automatic night light. (Fig. 2)

CONT.: Switches on the night light continuously. (Fig. 3)

### LOWER SWITCH

Pet Friendly ON: Turns on the pet-friendly mode helping technologies. The ultrasonic will switch off to allow a pet-friendly environment. (Fig. 4)

OFF: Turns on the ultrasonic, electromagnetic, and ionic functions. (Fig. 5)

### POSITIONING THE PRODUCT

For best results, make sure this product is positioned in an open area without soft material or furniture in the way (ex: sofa, drapes, carpet, etc.). Furniture that is made with soft materials absorbs the ultrasonic waves that are produced by this product. Ultrasonic waves bounce off material as they echo through the room. As they cascade through the room, the coverage will increase. (Fig. 6)
